Secure

MAIN CAPABILITIES

INGEST & CORRELATE

Archives, Internal, External and Open Sources within a central data lake.

PROCESS & SUGGEST

unstructured files (texts, images, video, audio) through NLP and semantic analysis for automatic suggestions.

EXPLORE

the entire data lake through complex searches and intuitive big data exploration capabilities.

COLLABORATE & SHARE

any entity on a need-to-know basis according to user clearance & data classification with automatic notifications and alerts .

INVESTIGATE

through advanced case management to correlate requests, reports, information and intelligence notes.

ANALYZE

in multiple dimensions the entire data lake by combining relational, temporal and geospatial analysis.

DETECT & PREDICT

using advanced data science techniques and algorithms for weak signal detection and prediction.

LOGICAL ARCHITECTURE
